

STAKEHOLDERS AND ENVIRONMENTAL PROTECTION

Environmental protection has never been the responsibility of human and it is how safely we explore nature, environment for our better living progressively to improve the environment in turn instead of diminishing its values. Stake holders are hence not the participants of the environmental protection activity but users of environment in a friendly manner to get best out of it, to contribute to the same constructively for its progression. Different levels of user start from small children to senior citizens of the common public who are to live with nature as their driving need is to go with nature to have a feasible life style for their might. The problematic stake holders are with authority in authenticated position of socio economic levels and human race as administrators, technocrats, and industrialists as they have superfluous money that their driving need is profit making to be on the top levels of hierarchy and demography to rule over nature where the problem arises. They must be duly regulated with user specific processes and reasonable profit to be verified for the certification procedure that there will be check on the environmental quality, resource use, and also economy from the user side to promote the quantity of user that everyone will be benefitted which promotes the standards of life too. Governance plays due role to regulate the stake holders to avail the best of environment that the vital participation is only by the governance with due regulations in the manufacturing process and not in the effluent standards that there should be pollution prevention and not pollution control. Here are some focus areas where there could be progressive changes to live with nature. It is to be understood as their ignorance and to sustain where there is no possibility of sustenance but evolution to live with nature. We got to take the form in which the nature keeps things flowing instead of resistance that we live peacefully. We can

take the black money as byname investment of the country as its reserves which has come out when it is needed for the country.

The electrical energy to drive vehicles with heat energy make pollution free transport and speed control that could reduce accidents too, is still in embryonic stage for the industries do not make attempt to bring out the same into practice.

Bioethanol as alternate, can be encouraged with sugar industries which need the support of the government.

Polyethylene can be prepared from the sugar cane waste which is a best alternate to bioplastics and is biodegradable.

There must be encouragement to new ideas form well established concern as they are affordable to take risk and they could sell a good idea for their established repute.

The food industry, apparels, construction industries, education institutions are the core groups which are taking up much of the income of any citizen to remain as successful citizen which make them take up luxurious, care free life and thus corruption and mindless activities.

It is the government which should make them inclusive with user specific attitude that the ultimate beneficiaries are the common public for whom the activities should go with the life pattern the public as a whole wish to have.

The people no matter how much they earn, do not wish to have the habit of saving, but learning experience and to live with what they have in the present and for which the government should turn towards building skills rather than to offer them ways to earn more.

It is the skills that is going to pay and which must be individual specific that education must be to refine an individual with confidence, openness to upgrade always.

Thread

Food industries, could extend their service to community serving in offices

and work places, apparel industries should offer a wide range of choice with uniqueness in every apparel, the ready to build technology with glues replacing the cement and sand should come up taking care of the scarcity on them. Conduct a detailed study on any one of these and bring out progressive strategies to conserve reserves, to serve the public to make them live peacefully. The breadth and depth to which you

approach a problem and bring out the perception is up to you. There is no constraint in defining the issue.

Life is like a drop of water on lotus leaf.

Unbounded connections with conviction makes one live peacefully.
