

Accomplishing Millennium development goals

Prologue

It is very much essential when a living being is introduced to the world all that it needs for its existence are sent along with it in its own possession, that it is on how the same carries itself in the environment to live, increase the longevity, stay connected to the co creation, complimenting to them and finally reach transcendence, surpassing all others, to mean, self competent to care for ones self without interfering with others.

Millennium generation goals are very much achievable if the target group is approached for their connectedness with their immediate sphere of influences

On its existence, every being , finds its place, by adaptation or natural selection and to the fact that it extends to non living things too, which we say sentiments which is common in every system, situation. None can be out of sentimental attachment, but it extends to the core that the feeling gives confidence and not takes the right of others. This

is on the fact that the situation, happening as a scene in the play of life, is through co creations linked with facts and words that boosts up, has no impact, and suppresses the energy level of all inclusive in the system that results in progression, sustenance or degradation.

As it is evidenced much from the dynamism and eternity, nothing in the universe is static, could be in view of mobility, growth, transformation, no object or living being in the universe remain static, it always undergoes changes to the finest level at least, that nothing could be sustained. It, being the universal component, covered by the concept that every thing transfer some of its possession with the surroundings based on their state and receptivity, which is a universal fact in every segment of knowledge, can only progress or degrades. When there is clear understanding that one can not be fragmented in a healthy condition, that occurs where the components goes to extinction, which is the extremity of degradation, one will always remain connected that there will be conducive symbiotic transfer and progressive development.

Similarly the connectivity, self oriented and which do not involve healthy transfer, but unethical exchange on agreement, will degrade

the system to extinction. Fragmentation is preferred only when there is symptoms of endanger if remain connected, and when incubation is needed as the object is self sustained and needs extraordinary conditions to grow further and which could not be kept idle till others reach the expected status, we call this situation as hot spot.

We are into the global spectrum where all the co creations are into close link for the same is shrinking with globalization that there is no demarcation, there is no wall of separation, there is no constraint for exposure, there is no reservation to opportunities, everything is thrown open equally for every one that the growth depends upon the individual, how the opportunities are availed and there can not be regulations and rules for masses any more for restrictive facilities, but liberated situations to assure individual dignity with the infinite facilities offered through internet.

Nothing could be hidden, nothing could be opaque, and nothing could be for authority and power, every information need to be available for every single individual that governance henceforth is for the individual assuring him of a peaceful environment to live with his own choices, certainly not to survive among the masses compromising

their 'self'. The global prosperity will hence forth be on human development which makes the global prosperity, understanding the need of everyone's participation in the system that every one gains the best of their talents making the world a better place to live complimenting each other. We shall device the governance for common civic, especially individuals that they become inclusive in the global growth.

The article 1 of the Universal Declaration of United Nations given in 1948 as "All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood" is taken here to justify the Millennium development Goals need modifications to reach the objectives and the time left with as target is just sufficient once the changes are made effective.

Accomplishing Millennium development goals

Introduction

The individual has the right to live on his own taking his best of desires and there occurs conflicts, for the desire may not stop with

getting what he needs, but taking others too for his acquired strength that there need to be a council to solve the issues amicably which need to take facts from both sides and which need to convince the involved for which the judicial system came into existence. The same all over the globe is aimed to establish justice that truth is favored, that the committer needs to compensate the losses to the complainant. The same has taken several different forms of laws and rules that the existing scenario, presents every sin compensated in terms of money and money flows from every direction making it a easy task for any one set to do the assigned task giving up the morale and ethics that the terrorism, trafficking, laundering and illegal military affairs prevail in every country which have their launch in several other countries with unprecedented connectivity that the network remains difficult to locate and eradicate and corruption is felt endemic throughout the globe and is the core factor threatening the progress of the globe towards integrity, prosperity and connectedness complimenting all components to take their fare share.

Achieving Millennium development goals

We shall view the global prosperity as the long term goal and is being visualized soon after the second world war and a lot of measures

have been taken through United Nations with various programmes to eradicate poverty, to give right to education, to reach gender equality, child health and maternal health, global partnership, environmental sustainability, combat HIV/AIDS. The dead line for the same is 2015 and in spite of the efforts taken by all involved, the same had not been reached to the satisfactory level and the recent meet is being called on behalf of United nations at Newyork by September 2010 to discuss on the measures to be taken. All the goals identified are taking into consideration the common civic, their living patterns and their connectivity with the global populace, the schemes derived for meeting the plans too are extensive and to the intricacies, the statistics available with any of the UN website are indicating clearly the finance poured into these schemes to meet the goals and the status of indicators are to show them the efficacy of the plans.

As a common civic, when we get into the schemes, their implementation, we feel the schemes are free and hence do not involve the target group, the benefits have not reached them for the involvement of mediators and there is no need to prove the scheme did not meet the purpose completely, none took to mind the efficiency

of the schemes in between, if would have done, they would have been on track well in time.

Moreover the goals too gave several different meanings with various levels of understanding that the schemes charted out deviated the mass from the core objective but to meet the superficial expectations in the form of numbers as statistics which is only given importance in the global arena towards success of any scheme which is really not so. The rapid action carried out to show the statistics as success indicator reflected badly on the outcome, quality that the same failed to the core and towards the end we feel the goals are still far away from reach. But there are ample scope for the same to be surpassed with progressive modifications and can be reached within the stipulated period, economically too if the target group is made inclusive and the outcome are to be shown as mandate at every level to take further grants.

Perspectives on the issues

We have to see the goals as child health, maternal health, gender equality, HIV and AIDs, poverty and hunger are interrelated and they have been taken as a curse by the involved individual, the

opportunities available for them to take a grand face change are more and what they need is not money alone through free schemes but their due involvement to change their living standards taking due assistance from the governance. Immediately after the second world war and till the recent times we made the global growth as prospects of the developed, developing and underdeveloped nations and through United Nations every needy country derived due assistance for its growth and in spite of enough financial assistance it could show meager progress only because of the same had not been utilized for purpose completely. The reason is the mediation and the finance reached the target group fully or partly for mediation not in the form of facility but money which tested their ethics and it is common at their level they spent it lavishly as there had been no binding in any form with the funding agency. This is observed not only with the poor group but with the nations as a whole as they spent them for public.

The turbulence and rapidity found everywhere, the urge to show case the output to move further or to sustain, celebrate the success to get more, the technological advancements without ethics and the lack of the same with the governing group are some of the causes of existing scenario. Having experienced the deficiencies and the actions

yet to take the swift, the United Nations is on the reformation and there were five governing groups initially when the United Nations had been established which were identified as organs and they all have been utilized to the fullest for the purpose that all involved territories have attained self governance in the year 1996 that the trusteeship council became inactive. When every member of the country is able to sustain their existence with self government, the same is an indication that they don't need more of free schemes but inclusive programmes to make them grow including their responsibility. This has been evidenced with the funding wasted to the core for there is no inclusive scheme and that unaccounted money resulted in several different unethical illicit activities threatening the globe as a whole.

It is high time to shed away all the previous facts, statistics and quotations to think about the globe as a whole and the prosperity of which lies in the integrity of all nations in the universe. The first and foremost task before the United Nations is to make all countries its member, inclusive and they should all be members of all the rules, treatise and conventions by conviction. There can not be exclusions, but there should be efforts to conviction by all inclusive that the strategy for global concern would evolve and that will solve the crisis

and issues existing in several different countries where the governance maintain rivalry and spend more on border protection, where the people of the involved nations would ever like to be cooperative and like to extend their hands for the needy. When almost all the countries are republic, almost all are democratic, and the governance is for the public, it should ensure peaceful environment to the people that will emerge out in to global peace which is the motto of United Nations and the reformation should ensure that, which will happen when old complicated articles and conventions are made simple for every civic to participate which the internet facilitates.

The rivalry between the countries will dissolve if they get to conviction considering the benefit of the public considering them as assets of humanity and belonging to the universe and there is no demarcation or borders that would separate them. With the advent of transportation, easy reach and with internet there is no native populace as of now, every civic finds their comfortable zone, be it within a working atmosphere or living environment. That is where the migration has made equality possible and the information is with every one in a finger touch that offers the complete transparency. The governance is not to set goals on providing transparency which is

already available but to execute the same in practice for an individual that they establish the governance with complete connectivity to meet the purpose.

What ever may be the basis of understanding life, as it is to be understood that mathematics, science, language, spirituality are all evolution of man's perception on nature which is yet to be found to the core, and as they all reflect nature, they are all connected. Hence the bottom line of better life standard is to move cooperative, with consideration of every other as co creation, giving them space to grow and giving them due right to express for conviction. The human rights lies with this and is very simple that further categorization as civil, individual, group, political, economic rights, they are all inclusive within human rights and will have numerous claims as single and with connectedness to other factors of existence and hence categorization, amendment, new articles will prove redundant and deviating from purpose if generalized and become restrictive where the truth finds difficult to establish and takes time which may some times takes the life time of an individual that he loses his duty and commitment totally on conviction.

The human rights and international court of justice, with all the local courts should function on the individual right to live considering the equality by birth as given in article 1 of United Nations in universal declaration 'All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood' which could be the bottom line of justice, bottom line of ethics, bottom line of living that every social being will be treated as co creation whether living or non living. When this is encouraged with due intervention of the United Nations, there will not be drugs, there will not be antisocial activities and there will not be terrorism that trafficking, money laundering will be eliminated that there will be ample opportunities to choose, ample opportunities to grow , ample opportunities to live together without compromising the individual dignity that we shall progress ethically without competing with others, but enhancing self competency only to reach the desire that the purpose of life is served.

The gender equality must be extended as per the article 1 of United nations Universal declaration that all are born free and have equal dignity and right that the same of one should not be taken away to give the right to the other. Every one must be treated with equality

and dignity that there should not be reservation based on caste, but on the will to come up and the economic status. Both men and women are equal, all children are equal and all beings of existence, both non living and living have their right of space that their connectivity forms a conducive environment to live with that if one is not there, there will not be the other. If negative is not there, we don't feel the values of positivity. If evil is not there, we will not feel the values of good. There must be a compromise for every individual who should start from finding his true self taking the differences of a wish becoming greed or desire.

Utilization of resources must hence be treated as equality of all beings in the universe which indicates we should not have the right to destroy an object before its life time. It must be transferred to the needy till its life time is reached. When every activity is considered for the purpose, without giving much concern on trend and design, that they ever remain in use, with no out dated mode, then there will not be related unethical consumerism which is testing the world to remain in turbulence always. This again is reflected in every one's life they loose the purpose of life to find the place of their greed, use all unethical, evil traits that they finally loose their life, family and enter

into survival giving up their morale, which is not the purpose of life. They should live every moment, take care of every minute satisfying their soul, that hours will be taken care of by themselves and finally the humanity replenishes its value to leads the globe in peace.

It must be instilled in every one's mind that each one will have their own turn, their own way which will certainly not be occupied by none as all the possession, position have been created and which could be changed to consider every single individual the assured level on attaining the skills, that every one become self competent, and there will not be human race any more, but progressive global development. When this is ensured, there is no need to spend finance in protection but to make the lives of the people upgraded everyway to give hands for the needy in any corner of the world that had been witnessed with the remedial measures of natural calamities in the recent times. It was observed that there was surplus than the needed, at all places which indicated that humanity still persist in individual human mind which had been suppressed by the complicated rules and regulations to stay away avoiding risks even in places where such trait is necessary for the responsibility. This is where the dilution occurs leading to corruption which is universal with globalization, though the intensity differs.

Right to education is to be viewed as the right to choose education with their own way as education can not be forced. We can not reach the 'education for all' status by forcing the education officers to bring the children in their area to school, get them enrolled on compulsion with free noon meal scheme and so on. They must be made inclusive and every one need to be treated as unique and the problem he faces can never be general. For all, in this millennium generation, the integrated approach of learn and earn works, irrespective of whether the student belongs to rural, semi urban and urban populace. It is a must to make them learn on their own taking the help of the teachers and the task should be on completing the assigned task by every individual and not by physical presence. There must be self paced learning that an extraordinary can complete the course and go deep for his interest and the slow learners could complete the task in their own pace. We have the restricted learning with every one being equal which is not the real meaning it conveys, but every one is equal to have the right to learn in his way as education should finally succeed in making an individual a man.

There must be integrated approach at all levels that an individual takes his own schedule to complete the assigned tasks along with professional skills and extra curricular activities all under one roof that the children of poor will come to school automatically as they learn while they learn in a protected environment that there could even be industrial collaboration at school levels. The idea of research, industrial collaboration, experiential learning all be made as a part of the curriculum which have been dreamt for a long time, and remain the day dream ever for the restricted environment. Education pertains to individual perception and that will not be in its peak in a forced, instructive environment. Every nation has its own scheme of social service, most of which is related to physical labour and India, emphasizes it to be voluntary and insists on the slogan 'Not me, But you' which is very much against the concept of co creation. To be in depth, to find the meaning of the slogan, there will never be selfless status; there could be differences to what the significance is given. It could be pride, wealth, knowledge, position, leadership, followers, love to God, faith to supremacy as spirituality, but there will be awareness of the individual which itself is 'Me' and with out 'Me' there will not be 'You' and it is 'We –You and Me' that keep the life going purposefully.

Hence social service must be instilled to every one as the will to help when needed and can not be forced. Every individual must be allowed to design their own comfort zone without disturbing others and should be progressive to them and that is where the stake holders of the society have their due role to play as connectedness and not control. Every one must be made to take part in others growth in their own way as social services taken to the global level that, it could be only social service and not national social service to reach a wide spectrum of life. With the innovation and creativity of an individual, it takes numerous forms that each can be unique in giving out his social concern. It must be inherited as trait in every individual which need no guidance and supervision and need no fiscal assistance.

The child nutrition and maternal nutrition can not be treated as the problem of the concerned but for the family as a whole and the integrated approach will make all in the family earn and they could get their food. It is not possible to achieve the goal if they are segregated and given importance. The children and the women experience malnutrition in spite of adequate earnings, because of the man who is a part of the family and who is indulged in ill habits of drugs and liquor. When this is evidenced, the activity is not for the women and children

to feed them in their place of work and study, but to ban the liquor and cigar shops and giving the involved due rehabilitation. It is not their right as the same spoils the entire family. A man with such a habit must be separated from his family for rehabilitation and he can be permitted to continue his presence with his family only after the successful recovery. Making them all with due assistance including finance where the same must be repayable that the finance effectively meets the purpose.

Environmental sustainability is again beyond reach as nature has infinite connectivity which can not be predicted and sustained at all. It will evolve and evolve making its existence dynamic and eternal and we form a part of it for a small fragment of the same that we can not take a concern on it. It is progressive by itself and the same can not be polluted at all. We for the abundance of resources, used them for our greed and we are being affected by the immediate surrounding which we believe as the environment in total which is not so. It is continuous, from, above and within and on itself that there will be an ecological balance always to resist the environmental factors with biotic potential. When the effect of the pollution is felt in the livelihood of human it is mainly due to anthropogenic activities exceeding the

assimilation capacity of the immediate environment in multifold that the same need to be attended. The anthropogenic activities causing the environmental pollution are altered with progressive human activities that nothing could be restricted but regulated to go progressively reaching great heights of human endeavor.

The pollution as a whole is prevented if the task of treating the polluted water and subsequent discharge is within the individual unit, be it an industry or the dwelling. There will never be soil pollution if the gravel stratum beneath the earth surface is located and the waste discharge is taken to that level through cess pools. There are plants that will take the nutrients in these discharges and grow well without getting diseases. The air atmosphere is the vast media with immediate flux that there is no reason at all to fear for the global warming if the anthropogenic activities are phased for the individual that the flux will be effective back to the environment that the ill effects due to pollution can be prevented.

The sun has vast energy reserve that we are finding a lot more wave lengths of use in the spectrum of light and that is due to the interaction of particles in the atmosphere which is again a phase of

evolution which need to be understood as an engineering intervention which need to be reinvested to balance the phenomena. The heat that is accumulated for the carbon sink could be utilized for charging the batteries that we trap heat energy in to green energy for which the abundance of green house gases act as the reservoir. This facilitates the heat coming back to the closed cycle of energy that we need not worry for global warming. It will become progressive with due rearrangement of natural phenomena utilized by human activity to trap energy from heat.

The unwarranted human interactions though personal meetings that dilutes the efficacy must be made online that we save a lot of resources not only to reduce carbon foot prints, but on the economic and human reserves too. We need not give up sophistication, we can balance it from our own hands that mindless use of resources since because it comes as complimentary for service, or a part of service will be avoided. We can reduce the personal visits for official matters if the expenditure is to be met by us since we have the effective alternate of online communication. We should change the goal as progressive environment and focusing the activities to self sustenance and to the responsibility and conviction of the individual we attain the same and

here too article 1 of the United Nations universal declaration as ‘All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood’ holds true that every nation should have no access to dispose, to encourage environmental degradation of any other country.

The nuclear energy is disastrous and we could generate needed power by the available resources and from the global warmth that nuclear energy generation and nuclear weapons are to be banned of research even as they are hazardous to cause disasters in the long run. Even the radio activity needs a proper revision for its advantage to find a place in the progressive science as what all it does have an alternate. There are some mysteries of science which need to be used as it is in the unleashed format as the mystery forms the protective sheath, the nuclear reactions, radio activity could be understood as natural phenomena involving science, but should not be used as a technology to benefit the public rapidly which actually brings irrecoverable hazards. Hence environmental sustainability must be modified to progressive environment with measures on resources conservation and

ecofriendly technologies to justify the same under human values not by profit and immediate reliefs.

Global partnership is the vital component of MDGs which has taken a rapid growth that globalization made it possible for exchange of anything and everything from among the countries which has reflected positive and has taken a negative shape for the greed towards rapid growth of all the countries which had shown exponential output in the recent years including India. India's image is unique in the global forum, for its ever green thoughts and global attitude well before the concept of globalization has been felt a reality. The attitude of development as self oriented thoughts has come up in every mind irrespective of nation, a leader or a follower, which indicates the Image of India, is not nurtured by the masses, but by individuals. This holds true for global civic too, that they need no demarcation with geographical boundaries and reach of every single individual is possible beyond visa, passport etc etc, through online that sky is his limit. It is outrageous to have restriction of reach with geographical demarcation and asking for deposits from foreign universities where it is by autonomy every institute can have their own collaboration with individual experts abroad that makes their curriculum unique and the

governance can have no control over it. It must be understood that the education scenario now with the internet makes it a complete man making process and it can no longer be a business. As every rapid prototyping faces an abrupt halt due to monotony and uniformity, the education business for the masses, selling degrees are to take up a face change to make it completely autonomy, to facilitate only registration to earn any many degrees possible at a time in their own pace of students that there is no comparison with fellows but evaluation of personal achievement and which should be available transparent for verification by any.

Imports and export formed a tool of entry, invasion in to a country which had been since ancient histories to recent times that the same need to be checked for effective procedures to avoid illicit activities. When a country needs a commodity from another country, it is the responsibility of the country in need to procure the same from another country and to take the same to their country that there will only be commercial activities within the country. This facilitates a universal currency being brought in to use as the value of the money in every country remains the same as universal currency. Indian rupee, American dollar, euro, yen, all currency unique to every nation

becomes the universal currency of their value that the value remains the same and will be denoted with universal currency in that particular country and this will be effective if import is at the risk of the country getting the materials and not with the country giving. With technology made easily available with internet resources it is possible to make any process from raw material to the finished good with the resources within a country and it could concentrate then on its strength that the wealth of every part of the universe as their strength will be progressively utilized by themselves. Taking into consideration the human value and the priority the material possession gains giving up ethics, the symbol for the universal currency should be null with a stroke, \emptyset , and can be denoted with C indicating the universal currency. With all the efforts made specific to individual which can go with the intervention of an individual in the activities of general assembly of UN to International court of justice which need no format where only the content need to be given importance, all the local governance will be transformed to conviction and if the activity is genuine, for the majority, it gains their support unanimously.

The administration is to execute the governance for the benefit of public only. In this case, there will not be human race further and we

shall make the United Nations include all countries and announce a day of universal oneness to be administered all over the globe with the oath as basis of constitution of all countries that 'All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood' and with the universal flag with checks of black and white which we use in the race to show the 'race finish'. There should be only banking in numbers which makes the accounting feasible to the finest level and it is to be noted that the black money is not printed elsewhere but the money unaccounted across the globe which will certainly cause losses as evidenced from the economic recession from where the same is invested that no country should encourage such activities. India, in spite of all these corruption at different levels remained safe in global economic recession because it invested intelligence and not money and the same had not been felt as equivalent of fiscal resources as the Indians focus only the longevity, assured job, not the right income for his expertise in global equivalence.

There is registration of properties bought by the NRIs in India who gives all their white money as black for registration value is much

less than the actual value existing in the market. They pay taxes in the countries where they earn and pour the same in India as black money for the existing scenario of true value much higher than the registration value. This is a major source of black activity in the recent times as the earnings are from groups of middle economic status whose property possession is out of the earnings of their young children who are not exposed to with the routine that they loose their sweat as black money. The situation could have changed to reality much before if any of they felt their right to raise their voice for the same. The Prime minister on behalf of the Indian government has given an open note to the NRIs to come back to India assuring that he could provide them what all they need. They could have utilized this for their purpose. The situation is actually a brain drain where the young stream looses all their charm and youth, bubbling enthusiasm for currency offered by multinational companies, majority of which went in unwarranted, mindless activities for they have not been educated to think, but to respond to the elders, to the society with trust, with the restrictive channel they pass by in education. It must be dealt by the international court of justice to voice for the youth spread through out the globe for their hard work and efforts are getting wasted with continuing illegal activities that were the routine before globalization

where the land ceiling act came into existence. For global financial integrity and transparency, every part of income must be accounted, justifying the same is to the individual that the fiscal reserves will be in use, in circulation benefitting the needy and deserving.

This will happen if all the banks are attached to World Bank with an apex bank in every country that the rules, regulations and norms are universal benefitting the public, taking the banking as services to have accountability of global fiscal resources. It must be remembered that the private banking banned in India as a part of twenty point programme in consequence to UN measures. We have now private banks, foreign banks through which the illicit transaction takes place for their wish to get more deposits at low rate of interest and their service charges make them only accessible for illicit activities. When there are no restrictions with national banks for an individual to have any many accounts, the only need to go for private and foreign banks is their immediate service and liberal procedures which were not controlled by even the RBI rules. Banking activity as it involved the backbone of economy in the global context can not be superficial, corporeal but be specific to an individual and offer services made to monitors via online and not in doorsteps. The banking can be made completely

online saving the resources and making their service charges to down to the floor that only national banks tied to the apex banks and which in turn is linked to World bank make the global finance integrity progressive making it completely transparent. It should ensure quick service every way by enhancing the experts in computing and online activities that providing gateway should be mandate without charges, ATM operated with web camera and thumb impression as identity to withdraw money makes the process simple.

The commercial activities are to the level of using credit cards in even small scale business centres that the currency be printed only in the denomination of fifty and should be to the maximum of thousand rupees per withdrawal in a day. For these all the private and foreign banks in every country are to be merged to have universal rules and we shall have universal currency everywhere. This makes the global partnership with equality and with equal rights that every individual deserves dignity and right to live. Making the marital status the right of the individuals concerned and making the identity of every individual unique for his citizenship makes the life simple and ethical. The assets are to be registered for the true value and there is no set guideline for

the area to which the property belongs as the same depends on the unique features of the property practically.

There should not be taxes from the employees and there should be involvement of government in every concern that it gets its revenue. In this way we make the activities transparent and corruption free. We can not control any activity, but by connectivity, being inclusive we can prevent all negative impacts identifying the root cause of the issue. The activities of United Nation should have been to individual specific since 1996, when the trusteeship council was inactive since every member country attained sovereignty.

The issues from ragging to promotion in education remain unsolved because the authenticated people do not have the mindset to give the best; they expect their successor to suffer what they had suffered. The revolutionary changes do not occur every where because though the suggestion from an individual is promising, the same is ignored as the governing do not want the fame and name to be shared. When one gets into authenticated responsibility, there should not be ethical dilemma and the benefits of the majority alone is the goal. Truth can not be hidden that true efforts will always speak. Life is all a

play and it is not a matter how long we play, how effective our tenure is, even our role may be short. To make it happen , no responsibility must be to an individual for a long time, but should be on a turn key basis and the core lies in accepting the suggestion even from common civic and responding to him duly for the responsibility that makes the transparency effective. It also must be emphasized that when a person takes charge he should give his plans periodically to the higher officials, and when he leaves the responsibility too, he must be in the justifying position of his tenure by periodically revising the contributions and taking necessary measures to maintain consistency and justice of his presence in the responsibility.

It is worth to mention the statement by the secretary general of UN on global warming recently in the Copenhagen meet as ‘Not to wait for the leaders, when the situation is dealt with, in the eleventh hour, it would be a weak deal or no deal situation’. The Copenhagen meet which was unsuccessful in bringing amicable solution liberated 46,700 tons of carbon for that meet which could have been saved if the discussion was online and that could have given enough time for the president of United states who ought to play a lead role rushed to his

place to attend to a crisis. The contributions will be the best if they are given with due space to think and respond for the universal growth.

The article one of the universal declaration of United Nations takes care of every other article and conventions that there is no need for its elaboration and forming general rules. The constitution of India, in its preamble, reflects the same and that too need no elaboration and general codes and norms. It has been felt in eighteenth century even that we form rules for the masses, where they are all individual formations with irregularities, which make the restrictive for the individual that violations become common. With the advent of internet, it is possible to include the individual to any global issue that the entire system needs to be reformed to include an individual that the growth will be progressive throughout with conviction. when we take the freedom of an individual to grow and have his preferred environment enhancing his own potentials, the governance has to assure the right to take his food, cloths and livelihood with his might and right to get the best of knowledge with his might, right to prove his own stance before the judicial system, right to assist the co creations to come up and right to derive his finance, right to spare their might in the industrious activities right from child hood and that is the situation

aimed at with the universal declaration, which is possible with online communication.

The governance must be integrated, with the goal to serve the affected with due application of rules, to prove justice without ethical dilemma the core of which lies in self satisfaction. The unattended grievances and anger for their inability to reciprocate to the authority is changing in to terrorism and antisocial activities and nothing else. When the rights mentioned above are assured, the individual become self satisfied, enter into self actualization, what he could do and that he could look around him to offer his best without which the changes will not happen. For this there should not be mediation, and the resources must be made available to the needy with their inclusion and there should be due conviction in every activity that we insist upon a transparent and easily approachable governance that truth will be established quickly and free that the affected will be convinced of governance.

The global partnership must be to initiate integrated approach that all will be given due jobs for their skills if approached, and given with financial assistance to grow further with the repayment of the

capital that make them inclusive, the rehabilitation centre should offer food, cloths, shelter free on the condition that they got to do a job for them which will be paid and that should be individual specific that they get corrected easily. The officials must be given due right to be involved with correcting the individuals taking the decisions of their own based on individuals and they must be connected to the monitoring programme to keep them always on track. This alleviates poverty to great extent. Judicial system, and education must be free to the core , to the level of giving compensation from the authority who failed to perform his job for the rules, to get a degree by simple one time registration to a university, the mode may be the choice of the individual, those who want class room teaching can take up the same, and those, on web can go for it, and they should have freedom to learn any many specialization that widen their knowledge which is possible by liberalizing the norms and fee structure only to registration. This sort of autonomy across the globe make the human development for global integrity and prosperity attainable with a short span as the reach are beyond boundaries. The academicians, politicians, administrators, policy makers as experts, government are the actual builders of tomorrows nation, and they must be skilled to convince the stake holders the common civic, mindfully, with facts and evidences, show

affection and compassion in action to gain confidence that there will not be conflicting situation but contributing situation. The salary paid to every one must be convincing his efforts and the funds allocated for salary must be liberal to exert maximum with commitment from the involved. They should be given freedom to quote what they want expressing their efforts and output and salary must be individual specific and for which they should adhere to the strategic plans they submit every five years. This makes them satisfied and the fund on the human resources are justified for the potential reserves utilized for the welfare of the country. There should exist a bond adding to moral and ethical commitment that the dilemmas will not intervene at any stage from any side. The department that monitors the law and control violates norms for their existence and to convince the political influences that they will not be disturbed as the governance is truly in their hand. If the governance as per constitution is to the department secretaries, headed by the governor, such situations will not exist, and the same will get strengthened to refuse illicit oral orders if every thing becomes online that there will only be official communications online.

The finance must be transparent and accountable to the core that the properties must be registered to the true value, and employees

restricted to work for limited hours balancing personal and professional and they can take their choice of span as the assessment will be on volume of work and quality and not physical presence as tenure and quantity. This will reduce the environmental pollution and take care of progressive environment always. There is no need to set emission standards to finest level. The atmosphere is boundless and will take care of emissions, if the transition, flux to the surrounding is conducive to be fast. The shifts of office hours reduced to six hours a day in different segments makes it happen reducing the vehicular pollution which also reduces traffic congestion and related accidents. All banking activities are to be nationalized linked to the World Bank and the activities must be transparent to the least value of universal currency that the gateway is free of charge and mandate for every bank which minimizes the personal visits. There may be losses, but must be accounted to take care of the futuristic development. This ensures global partnership giving equal dignity and priority to every country and every citizen to query on any development activity.

The consumer products are the sources where the cash will be locked and concentrated for the greed of the public towards trendy products. There will be a minor change in the cosmetic side of the

product may it be a car, a minor change in the utility may it be the washing machine, or water purifier, an up gradation of the product within a short span may it be a soft ware, decrease or increase in price, the change will not be justified for one who brought the earlier version. The same should reflect on the consumer positively for ethics as they are using a inferior product for higher price having brought the product earlier even when it is on the introduction phase. The risk taken by the user and for the feed back of whom the upgraded version came into existence must be given as product exchange to them as the price fixation is extremely high on the profit margin sometimes manifold for the value and utility of the product. There must be justification on how the price is arrived at even in food products as the sophistication and interior design of the restaurants even reflect on the price of the food items sold which is unethical. All super markets which sell the products with a free option are bogus and should be banned of such an activity to the extent that if the product comes to the market as one for one free, the product must be insisted to be sold at half the price. The consumerism on the discount side is also reflecting badly on the user side to the level of gold jewels whose quality will never be the same as the season without discount, and this leads to continue the same trend ever that some times the branded products too find a lag. Value of the

product need to be fixed for the costs involved in the entire procedure which need to justify the cost involved towards the economy side in every part of the manufacturing procedure.

The essential products as medicine, and food too have imitations almost to finest level of accuracy outward that they can not be identified. Technology has improved much and the same had been practiced for illegal with uneducated much easily than educated that honey, the milli gram measure of medicine in capsule, cod liver oil capsules have fake activities which makes the welfare of the patients a question in spite of expensive medication in hospitals. There are no stringent measures throughout to check the activities; there are no stringent measures to obtain the safety factors if the product is related to life of the user even. The vehicles come out as different versions quite frequently with prices unjustified as cosmetic alternation is just an additional component which could be fixed to an existing vehicle too. But for the same the price difference is not justified. They use thin steel for body shell to increase the speed of the vehicle but the impact factor is not given in any of the vehicle's profile. They can be altered with the design to take more impact which is not attended by the companies. The regulations across the globe must be to give the safety

factors as test reports along with the vehicles pertaining to the profile of the vehicle to justify cost. The technologies used by the company Eureka Forbes are simple and they sell their products for high cost much above the same by other companies with the same technologies. The water purifiers and vacuum cleaners they sell are much higher in price than the rest of the companies selling the products with same technology. They enter into annual maintenance and refill the activated carbon every time for a higher cost with out the same needs replacement depending on the usage. The other companies have the indicators which show the need to change and at that time alone they can be changed. They focus on house wives at home by selling the products at doorsteps where they get into unethical commercial activities using the ignorance and the wish of the buyer to upgrade life styles. The cosmetic products of the Amway are on this side of door steps sales, where the extremely high cost is not justified.

With the above examples, one could find the hazards with the lives of common civic for the unethical commercial activities. There must be integrated approach that the pharmacy must be attached only to hospitals and the hospitals are to be certified to check the products for quality before put to sales. There must be integration of every

other consumer products, that luxury to basic needs should conform the entire procedure involved made explicit to the public and price justified based on the same with the profit margin that only make the consumer to buy the products. Like the procedure to use the same as manual, it must be in the printed mode and supplied to the consumer on every purchase along with the product that the price is justified to him.

The focus of the civic are towards getting quick beauty that they get into plastic surgeries, fitness programme, crash diet programmes, makeover corrective programmes which uses laser technologies and which may not suit all for their unique physical conditions and this takes up some times the life of the individual even and hence there must be a check on the advertisements of this sort to curtail them immediate if the expert is not specialized. This is not getting revealed to the forum for the status issues of the individual which is taken as advantage and these activities are booming up in the recent times. It must be instilled into everyone's mind that the nature has given a unique beauty for every one and none can be made as copy of a celebrity, though he is ready to spend the highest bid. If the medical people who duped Michal Jackson for his wishes as greed would have

been ethical, told him that such frequent surgeries would kill him in the long run, the world would not have lost him much earlier, his talents brought him fame, not his appearance.

‘Conviction’ is the key to achieve the universal oneness and we shall expedite a day universally celebrated as world peace day when we all integrate and when we all salute the flag of ‘race finish’ realizing that the universe has ample opportunities to every one to choose, that self competency is the way. No other way works longer and satisfies one to give out the best. With this global partnership we can progress into bright world where every one do their job for their conviction without interfering with others for greed. Political system must be transparent and to be made efficient by dissolving the houses and committees and make every individual to participate in the decision making that every one can make contributions and getting the citizenship of every individual linked online to the global partnership is possible with online communication. All documents and proceedings should appear online eliminating the use of papers and we achieve resources conservation to suit the needs that we need not limit the populace which is certainly not the family planning, planning for the effective carrying of life with the wealth we have is family planning for

which the will is required and not the assets and wealth. Unity is not in accepting what the majority does, integration is not in maintaining idleness when response is necessitated, team spirit is not in cooperating with the leader mindlessly, and cooperation is not in going with others blindly. Non cooperation and solitude many times makes the living come back to track. We shall expedite a day of universal oneness and universal currency to shed away the complicated survival and get transformed simple living for which we all shall integrate under United Nations on its reformation to reach the needy by mind not by money alone. We shall make the universal declaration rule the globe for human development progressively.

There is no instant remedy, quick heal for long time damages that the resources replenish with our due measures to go online to the extent possible. The human values will replenish and all ill forces corruption, brutality, authority, etc , etc pulling the humanity from being progressive will descend if the conscience of every one is waken up that we go for every individual globally and the governance can no longer be for masses. It has been felt in the earlier centuries as day dream which is very much possible now for the online communication that we shall make it happen. There had been a thought that the land

areas inundated for the melting of ice bergs will reappear when the ocean level reduces due to environmental changes for the dynamism of the earth. The virtual space utilized to the level of making people far apart to see, discuss and take decisions online, that the physical efforts are getting reduced to a greater extent and we are reaching a comfortable zone designed for our own talents to give the world our best.

Technology has advanced much that we can cultivate barren lands, we can do jobs for others online from our native environment and we can reduce the intake of food for the reduction in physical efforts. The reason for obesity in majority is less physical efforts, and not over intake. Carbohydrates are complex in rice and need a lot of time to get digested and which is needed when lot of physical work is done that the required carbohydrates be substituted with simple starch as potato and banana, protein from milk and curd, vitamins and minerals from vegetables such as carrot, tomato, ginger, garlic, coriander, mint, lemon and these give a wide variety of easy to make delicious dishes with lots of water balances the food needs and make one healthy and fit.

The needed fat is available in milk products they do contain casein which is a natural glue good to repair the fine crow lines on face, cereals such as whole wheat grain, barley, and sago, spices such as cardamom, cinnamon, cloves, cumin seeds, basil seeds, mustard, fenugreek, fennel seeds, pepper give the necessary minerals and can be added in plenty to any food and salads. These foods are ideal for the modern living pattern where all in family work and have less time to spare to cook. This part is very much essential to view the MDGs, as a whole, as when we get switched over to an atmosphere of less physical mobility, the right part of food improves the efficacy and reduce burdens. Where as those who work in field can take alternative grains available native such as maize, wheat, ragi, Italian millet, spiked millet, kodo millet with all types of spinach make a balanced light food to work hard that we have the regular grains with pulses as full meals one time a day preferably at night when the body repairs itself and with salads, juices with honey and all sorts of spices to get variety, lots of water all through the day make one feel comfortable all the day and food is important for the character building of people, more non vegetarian food and complex food make them irritated easily, they are all difficult to digest make one uncomfortable and turn them to flair up with negative emotions originally.

Light foods, not only reduces obesity, make one healthy and fit, but reflects on the prices of food grains too positively, which is an alarming issue across the globe these days. Apart from these, light food, make one feel light and energetic always and he can glide in all sort of emotions, make himself receptive, clear and responsive, that he makes every other inclusive. When heavy food make one self oriented and materialistic, light food make one inclusive and transcendent. Transcendence is not the quality of monks. It is very much the needed quality to live, which will not come when one leaves everything, but when one prepares to receive everything. This ensures relaxed state, when we set the control to intuition and conscience where we never go wrong and that builds confidence. All the light food mentioned above is rich in antioxidant too, that provides healthy tissue formation for muscles. Exercise to reduce obesity results in the formation of free radicals from cells due to over oxygen intake in the work outs and hence result in cell damage in due course of time. Anything to crash is again proved problematic and hence need due attention. Best way is to take light food to give enough energy to carry on the regular life without the same getting into flesh to add to body mass, which is individual specific. The diet depends on the nature of work one has to

carry out on that particular time and the total energy of intake will be spent within three hours.

It has been surveyed that in 1950s the average food available to a citizen is 500 g /day and this has been reduced now for most of the agricultural lands have been converted to infrastructure for booming educational institutions and to meet the needs of transport and commercial complexes. But for the awareness of use of virtual space coming in, we are getting in to calmness from vibrant mode that we can have international education from home, we can leave the agricultural lands for cultivation and we could use them to the complete efficacy with advanced technologies. At this point, it is to be remembered that agriculture is another profession which has its due values and returns that free schemes are not needed and the same make them lethargic as they are the best identifiers of natural changes by experience and could utilize the same for their benefits. They lived with nature right from the beginning of the civilization that they need no sophisticated weather monitoring system. The lag is in the part that the experience of the elders has not been transferred to the young masses doing agriculture as their specialization. They should have on field experience and like the old folk songs specific to rural masses

which had no record are being recorded now; we should have the registry of indicators from these elders.

Conclusion

We can understand the nature to its finest detail that it has to be best utilized and going against the same make the pollution and hence disturb the best form we could enjoy the nature for which we are going to be the losers. The nature is eternal and is ever evolving that we can not sustain and need not protect, but use it to the fullest in its best form simply that we progress. For ecological balance with environmental resistance neutralized by the biotic potential and for the Newton's law of motion, every action has equal and opposite reaction, we need nothing to sustain, the stronger at that moment establishes itself, but the change of status comes only when the defeated gets convinced of the truth and if not, the truth reveals itself in several different ways and that keeps the living going for millions and millions of years. With this in mind, the transparency, authenticity and e governance to balance the opacity, authority for political governance as democratic will happen. Sooner, we wake up, safer will be our living, and we shall not secure the environment for future generations, the nature has its own role for them. We need to live our lives mindfully,

that we increase our longevity and the Nature is the Godfather of all, which has its due role to every one and care too. Believing ones self, self realization, enhancing skills are the progressive ways and they shall contribute to others on the way , for which one need not compromise his self. The world is not to a leader, the world is not to a single man, the inherent connectivity infinite makes the life going in spite of all if's, and don'ts, the world is to every one.

The governance needs no mediators, it must be simple to the core that the needy approach them as they are and register what they wish, the same should make the grievances registered as it is to the experience, and we have several options to register even as voice messages that formats are to be taken away. The man power can be increased to get the right job done in the right time convincing all involved, and that share of fund is never going to be questioned, the same will appear when the personnel do not fare their share in governance and when that happens, we will reach MDGs well in the expected time line. It is to be viewed as integrated involving individual to take a mind change and confidence that he can live, not survive. Money assists him to get his due, and is not everything to living. We shall instill in every mind is that every other being is co creation and has the right to have its own life time, the '**race is finished**' and every

individual has to live his own life competing with his own efforts, as the globalization made ample opportunities to every one, and the choices make him feel unique and special.
